BIOCHEMICAL JOURNAL

MOLECULAR MECHANISMS IN BIOLOGY

portlandpress.com/biochemj

For over 100 years, the *Biochemical Journal* has been at the forefront of biomedical advancement, breaking new ground in the fields of biochemistry, cellular biosciences, and molecular biology. Rigorous understanding of molecular mechanisms in biology is at the core of the *Biochemical Journal's* mission. The journal is proud to play a key role in advancing understanding through publication of high-impact research and reviews in 21st century biochemistry from across the world, leading the way in an era of rapid change.

Chair of the Editorial Board | Mark Lemmon (Yale University School of Medicine, USA)

Associate Editors

Dario Alessi (University of Dundee, UK)

Jonathan Backer (Albert Einstein College of Medicine, USA)

Ben Black (University of Pennsylvania, USA)

Clay Clark (University of Texas at Arlington, USA)

Xiao-Wei Chen (Peking University, China)

Michael Duchen (University College London, UK)

Patrick Eyers (University of Liverpool, UK)

Christine Foyer (University of Birmingham, UK)

Tatiana Kutateladze (University of Colorado School of Medicine, USA)

Ilse Kranner (University of Innsbruck, Austria)

Pilong Li (Tsinghua University, China)

James Murphy (Walter and Eliza Hall Institute of Medical Research, Australia)

Hayley Newton (University of Melbourne, Australia)

Katrin Rittinger (The Francis Crick Institute, UK)

Stanislav Y. Shvartsman (Princeton University, USA)

Anabella Srebrow (University of Buenos Aires, Argentina)

Gregory Steinberg (McMaster University, Canada)

Cathy Tournier (University of Manchester, UK)

Bart Vanhaesebroeck (University College London Cancer Institute, UK)

Ming-Wei Wang (Chinese Academy of Sciences/Shanghai Medical College, Fudan University, China)

Natasha Zachara (Johns Hopkins University School of Medicine, USA)

Chiara Zurzolo (Institut Pasteur, France)

Articles

-  Evolutionary and cellular analysis of the 'dark' pseudokinase PSKH2
-  Identification of ester-linked ubiquitylation sites during TLR7 signalling increases the number of inter-ubiquitin linkages from 8 to 12
-  Therapeutic potential of metal ions for COVID-19: insights from the papain-like protease of SARS-CoV-2
-  AMP-activated protein kinase – a journey from 1 to 100 downstream targets
-  Impact of climate perturbations on seeds and seed quality for global agriculture
-  Up-regulation of the PI3K/AKT and RHO/RAC/PAK signalling pathways in CHK1 inhibitor resistant Eμ-Myc lymphoma cells

Special collections

-  Tackling SARS CoV-2 biochemistry
-  Towards systems biochemistry
-  Cell death and survival
-  Plants and climate change: the role of plants in achieving net zero
-  21st century approaches to studying cell signaling

POLICY
WE ACTIVELY CONTRIBUTE TO
THE EVOLVING LANDSCAPE
OF ACADEMIC PUBLISHING

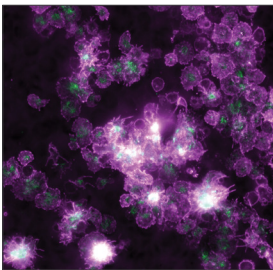

The Biochemical Society works in partnership with researchers, institutions, and funders to share knowledge and advance the molecular biosciences. Disseminating world-leading research and reviews through our publishing arm, Portland Press, we return all related profits to the life science community in support of our charitable activities. With more than 5.4 million worldwide article views in 2022, our journals cover the breadth of the molecular biosciences and support the transition to a more open scholarly landscape.

Open scholarship

As an independent society publisher, we're committed to an open research landscape that supports global scientific advancement. As well as pursuing a sustainable transition to full open access publishing, we've implemented policies that promote open data and improved transparency on author contributions, and have integrated the unrestricted availability of article citations, references, and abstracts.
