OPEN SCIENCE

As an independent society publisher, we made a pledge to create funder and institutionally complaint open access (OA) routes for all published articles in 2025, and we're pleased to share we have achieved this through our four OA pathways.

**BIOCHEMICAL
SOCIETY**

(Registered Charity No 253894)

The Biochemical Society works in partnership with researchers, institutions, and funders to share knowledge and advance the molecular biosciences. Disseminating world-leading research and reviews through our publishing arm, Portland Press, we return all related profits to the life science community in support of our charitable activities. Our journals cover the breadth of the molecular biosciences and support the transition to a more open scholarly landscape.
