

Equality, Diversity & Inclusion

Our EDI Advisory Panel works to support a diverse and representative community, helping to ensure the Biochemical Society's activities are open, transparent, and available to all. Our committees, boards, and panels aim for a range of expertise and experience to better reflect those working across the molecular biosciences.

Grants and bursaries

Our grants and bursaries reflect the breadth of experiences from across the biosciences, welcoming applications from all global regions and career stages and providing support for a variety of accessibility needs

Digital resources

We incorporate accessibility requirements across all online platforms and communications, embedding practices such as correct colour contrasts on our website, fuzzy search functions, and the use of alt text and subtitles

Accessible meetings

Accessibility is considered across our meeting calendars, including management of time differences, dates of religious festivals, and the provision of quiet spaces for delegates

Open science

As an independent society publisher, we're pursuing equitable, inclusive, and sustainable open practices that support the bioscience community and provide all authors with compliant open access
